

NOTE:

Please zip code for every task and save as YOUR_UPWORK_NAME_TASK_NUMBER.zip and send us. If you have any doubt you can ask us. Also create requirements.txt file so that code can be tested properly and put instructions file.

Task 1.

Background: You are creating a tool for your team members. They don't know much about programming but they do know how to run cells in a jupyter notebook. While creating the tool you should focus on proper explanation of every cell for your team members and keep code in jupyter notebook as minimal as possible, not to overwhelm your team members.

Task: You have facilities.json file. Create a tool to search a facility, select it and show it's ID. You can create a UI if you want or you can just do everything in Jupyter Notebbok

Time limit: 1-2 hours
